DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it is too long. Correction is required. See MPEP § 608.01(b).

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 1725

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 12-23 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 10 of U.S. Patent No.

6860075 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because both teach a coating apparatus comprising multiple sections or chambers separated by flaps, a vacuum source and conveyor means.

However the '075 claims do not teach automatically controlled handling or a computer program.

It would have been obvious to one of ordinary skill in the art at the time of the invention to employ a computer program as is known in the art to automatically control the process and thereby ensure reliable, uniform coatings.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 12-18 and 20-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Landau et al. (USPN 4857160).

Landau teaches an apparatus capable of manufacturing heat-insulating structural and/or light elements, the apparatus comprising a conveying device, a vacuum source

and multiple sections (chambers) and cleaning and coating sections (col 12 lines 48-64) which are automatically controlled via a computer program (col 2 lines 17-46, col 4 lines 15-56, col 12 lines 6-42 and col 13 lines 49-57).

7. Claims 12-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Beckham et al. (USPN 3673981).

Beckham teaches an apparatus capable of manufacturing heat-insulating structural and/or light elements (col 1 lines 22-75), the apparatus comprising a conveying device, a vacuum source, multiple sections (chambers) separated by flaps (doors, col 67 lines 31-70) and coating and cleaning sections (col 76 lines 11-37) which are automatically controlled via a computer program (figures 1, 113-118, col 2 line 4 – col 3 line 40 and col 66 lines 8-75).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Smith Jr. et al. (USPN 3086882, apparatus, no program), Hughes et al. (USPN 4981408, apparatus), Bauer et al. (USPN 3017852, apparatus, light), Love (USPN 4274936, apparatus), Matsuzawa et al. (USPN 6881269 B2, apparatus, light) and Sager (USPN 6637644 B2).
